OASIS Study News

Drug Safety Research Unit - www.dsru.org/oasis

As the OASIS study approaches the end of its second year, we welcome new members to the OASIS team. Emma Hawke joins us as the new facilitator in the South, and Linda Robinson will be taking over the Midlands whilst Fiona is on maternity leave. I'm sure that they will be in touch to introduce themselves, if they haven't already!

We have now recruited over a third of our final cohort, and thank you all for the contributions you have made so far. The challenge this coming year will be to continue to increase our recruitment in order to reach our final target of 1500. I hope that with your continued support and the assistance of the MHRN and our dedicated study facilitators, this will be achieved.

Wishing you a Merry Christmas and a Happy New Year

Dr Sarah Clarke—OASIS Study Manager sarah.clarke@dsru.org

All change in the OASIS team!

Good luck to Fiona!

Our Midlands facilitator Fiona Holloway is expecting her first child this December. Fiona started her maternity leave at the end of November and will spend the next 6 months enjoying life as a new mum! In January, Linda Robinson will take over the Midlands region until Fiona returns from her leave in May.

Linda is an experienced research nurse and has most recently been working with the DSRU on the DARE study. We wish Fiona all the best and welcome Linda to the OASIS team.

Welcome Emma!

We also welcome our new Southern Facilitator Emma Hawke to the OASIS team. Emma joins us from the University of Southampton, where she previously worked as a Senior Genetic Research Assistant, working on a number of studies. Emma will bring new experience to the team and we welcome her to the DSRU family. Emma will be contacting and getting to know her investigators and CSOs in the Southern region in the coming weeks, so please do take the opportunity to meet with her and refresh yourself with the OASIS study.

Merry Christmas

When does the OASIS Study end?

Not for some time yet! We have received a number of recent queries regarding the end date for the OASIS study. The end date for the study is the **end of March 2013**. This will be the last date that we will accept new recruits to the study. We will still be collecting baseline, 12-week and follow-up questionnaires, when requested, after this date. That leaves plenty of time to continue recruiting patients!

We are always on the look out for potential investigators. If you have any colleagues who prescribe quetiapine who might be interested in taking part in OASIS, please pass on this newsletter. More information about the study can found on our website

www.dsru.org/oasis

Or contact one of our study facilitators, listed on the left.
